

No Sag, Moisture & Impact Resistant,
Ceiling Tiles & Wall Panels

Sound Silencer™

An Entirely New Kind of Acoustical Panel
Made with Porous Expanded Polypropylene (PEPP)

Sound Silencer™
Acoustical Panels
"Unlike Any Other"

- Water Resistant ■ Washable ■ Durable ■ Non-Fibrous ■ Lightweight ■ Rigid Strength
- Flame Resistant ■ Non-Abrasive ■ Indoor/Outdoor ■ Impact Resistant ■ Both NRC & STC ■ Tackable
- Sag Resistant ■ Resilient ■ Mold, Bacteria & Fungi Resistant ■ Oil and Chemical Resistant

AVAILABLE
EXCLUSIVELY FROM

Sound Silencer™ An entirely new kind of acoustical panel.

New Construction and Retrofit

Sound Silencer panels are easily installed for improving sound control in environments such as gymnasiums, ice rinks, swimming pools and other challenging environments.

- Gymnasiums
- Auditoriums
- Classrooms
- Indoor swimming pools
- Skating rinks
- Ice rinks
- Arenas, stadiums

Environmentally Sensitive Areas

Sound Silencer panels are non-fibrous, and are ideal for use in environments sensitive to airborne particles, such as clean rooms, laboratories and food preparation areas.

- Manufacturing clean rooms
- Laboratories
- Computer rooms
- Food processing plants
- Food preparation areas
- Cafeterias, restaurants
- Chemical processing facilities

Industrial Applications

Sound Silencer panels are resilient, incredibly durable and resistant to oils, grease, most chemicals and water. Sound Silencer panels are completely washable, even with power washing equipment and detergents.

- Manufacturing plants
- Car wash facilities
- Machine shops
- Automobile dealerships
- Gun ranges
- Rooftop enclosures

Sound Silencer™

Acoustical Panels

“Unlike Any Other”

- Class A Fire Retardant
- Made from Porous Expanded PolyPropylene (PEPP)
- Non-fibrous
- Structurally rigid
- Water resistant
- Non-abrasive surface
- Indoor/Outdoor
- Both STC and NRC ratings
- Impact resistant
- Tackable surface
- Bacteria and fungi resistant
- Lightweight

Water Resistant

Sound Silencer panels resist moisture in all forms, whether humid environments or direct exposure to water, indoors or outdoors.

Impact Absorption

Sound Silencer panels are resilient and able to repeatedly absorb energy in situations such as gymnasium walls or indoor swimming pools.

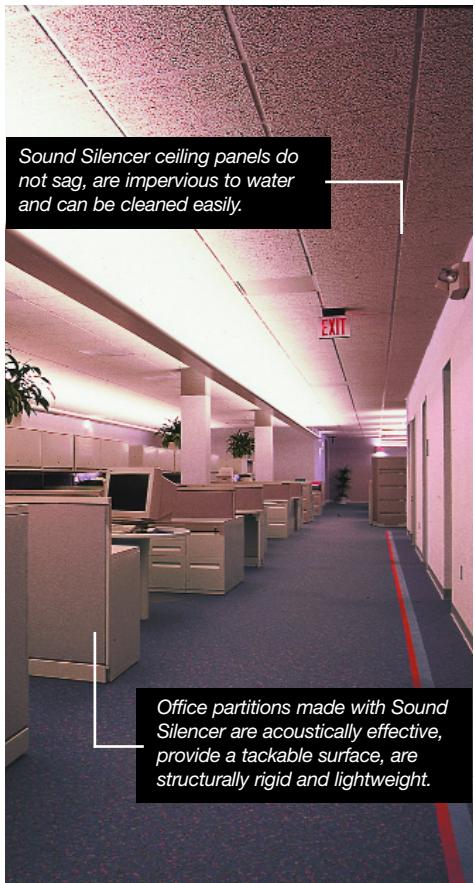

Tackable

Sound Silencer panels can be punctured repeatedly with thumbtacks and push pins without damaging the surface.

Washable

Sound Silencer panels are easily cleaned with water and detergents. Gentle power washing is suitable in many environments.

Non-Abrasice

Unlike some other rigid acoustic panels, Sound Silencer has a smooth non-abrasive surface.

Flame Resistant

Sound Silencer panels carry an ASTM E-84 Class A Fire Resistance rating.

Rigid Strength

Sound Silencer panels are strong enough to support a concrete block on edge. For applications such as outdoor sound enclosures, its light weight can help reduce the structural support requirements. Sound Silencer panels are also buoyant, resilient and flexible.

Buoyancy

Resilience & Flexibility

Sound Silencer™

Acoustical Panels made with Porous Expanded PolyPropylene (PEPP)

This test data reflects performance of Sound Silencer acoustical panels, made from porous expanded polypropylene bead board, under specific controlled test conditions and is subject to normal manufacturing variations. In addition, the numerical flame spread rating is not intended to be indicative of the characteristics that would be displayed by Sound Silencer acoustical panels, made from porous expanded polypropylene bead board or any other materials under actual fire conditions.

Sound Silencer panels, made from porous expanded polypropylene bead board, are sold subject to the limited warranties and disclaimers in the manufacturer's limited warranty. Acoustical Surfaces Inc. makes no other warranties express or implied, including, without limitation, any warranty of merchantability or fitness for a particular purpose with respect to Sound Silencer acoustical panels, made from porous expanded polypropylene bead board.
