Echo Eliminator™ Worked GREAT for TV Studio and Was EASY TO USE!

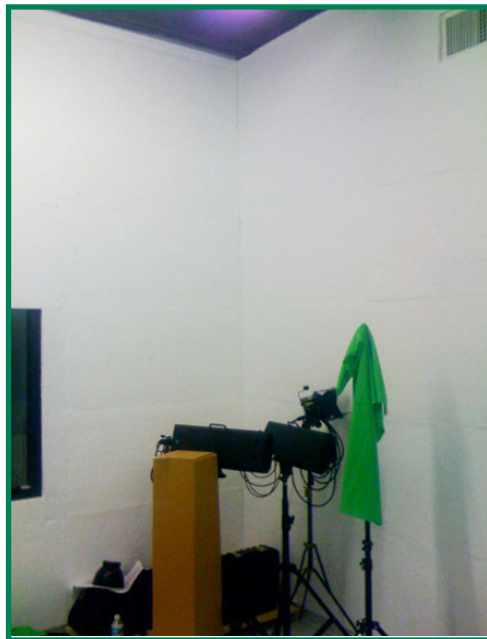

Before the panels were installed, this studio was constructed with reflective surfaces which yielded very poor audio recordings. Concrete floor, sheetrock walls and a sheetrock ceiling are not ideal when constructing a studio, which is why acoustical treatment was necessary for this space.

Ted,

Wanted to drop you a note to let you know the panels work great. We have shot 2 spots already and it sounds marvelous. Thanks for all your help. I highly recommend this product to anyone who needs this done. Easy to put up and you don't need a blade. I used scissors to cut the panels and it worked perfectly.

For this studio, 1" 3 lb. white Echo Eliminator panels were used to absorb the echo and reverberation and greatly improve sound quality, while not breaking the bank. The customer chose our white color so that the paneling did not affect the overall lighting in the room.
